

Training Day16 report

28 June 2024

Introduction of alert(), prompt() and confirm()

1.Alert(): An alert box is often used if you want to make sure information comes through to the user. When an alert box pops up, the user will have to click "OK" to proceed.

Syntax: `window.alert("sometext");`

Note: The `window.prompt()` method can be written without the window prefix.

Example:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Introduction about alert,prompt and confirm</title>
  <style>
    .col
    {
      border:4px solid green;
    }
  </style>
  <link
    href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.3/dist/css/bootstrap.min.css"
    rel="stylesheet" integrity="sha384-
    QWTKZyjpPEjISv5WaRU90FeRpok6YctnYmDr5pNlyT2bRjXh0JMhY6hW+ALEwIH"
    crossorigin="anonymous">
</head>
<body>
  <nav class="navbar navbar-expand-lg bg-body-tertiary">
    <div class="container-fluid">
      <a class="navbar-brand" href="#">AMAN</a>
```

```

        <button class="navbar-toggler" type="button" data-bs-toggle="collapse"
data-bs-target="#navbarSupportedContent" aria-controls="navbarSupportedContent"
aria-expanded="false" aria-label="Toggle navigation">
        <span class="navbar-toggler-icon"></span>
    </button>
    <div class="collapse navbar-collapse" id="navbarSupportedContent">
        <ul class="navbar-nav me-auto mb-2 mb-lg-0">
            <li class="nav-item">
                <a class="nav-link active" aria-current="page" href="#">Home</a>
            </li>
            <li class="nav-item">
                <a class="nav-link" href="#">Link</a>
            </li>
            <li class="nav-item dropdown">
                <a class="nav-link dropdown-toggle" href="#" role="button" data-
bs-toggle="dropdown" aria-expanded="false">
                    Dropdown
                </a>
                <ul class="dropdown-menu">
                    <li><a class="dropdown-item" href="#">Action</a></li>
                    <li><a class="dropdown-item" href="#">Another action</a></li>
                    <li><hr class="dropdown-divider"></li>
                    <li><a class="dropdown-item" href="#">Something else
here</a></li>
                </ul>
            </li>
            <li class="nav-item">
                <a class="nav-link disabled" aria-disabled="true">Disabled</a>
            </li>
        </ul>
        <form class="d-flex" role="search">
            <input class="form-control me-2" type="search" placeholder="Search"
aria-label="Search">
            <button class="btn btn-outline-success"
type="submit">Search</button>
        </form>
    </div>
</div>
</nav>
<div class="container">
    <center><h1>WELCOME TO AMAN WEBSITE</h1></center>
    
</div>

```

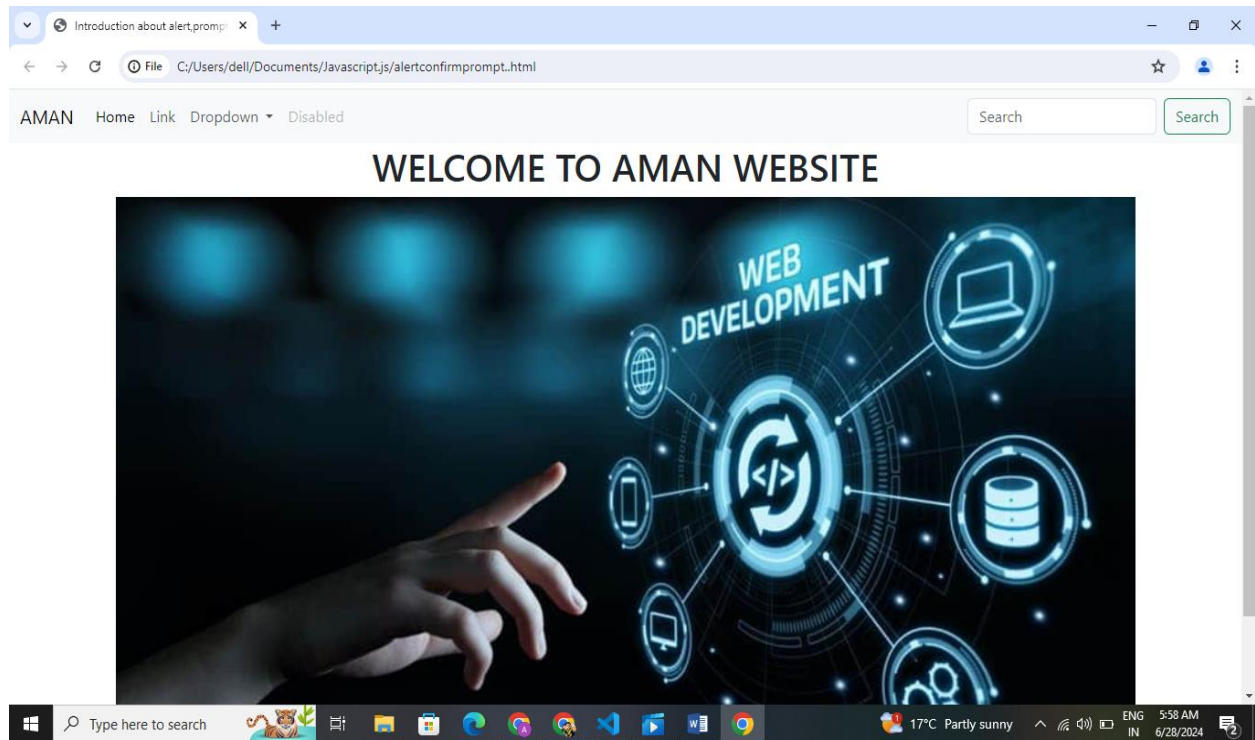

```
<script>
    //does not return anything you can select (ok) only not other choice
    // no return
    //let a= alert("Welcome to Aman website");
    //console.log(a);
alert("Welcome to Aman website");
    //let name=prompt("what is your name?", "here");
    //console.log(name);
    //let deletepage = confirm("Do you want to delete this page?");
//deletepage ? console.log("Page is deleted successfully") : console.log("Page is
not deleted");
//console.log(deletepage);
</script>
</body>
</html>
```

Output:

Step 1: click on ok (no return).

Step 2: Site is open.

2.Prompt(): A prompt box is often used if you want the user to input a value before entering a page. When a prompt box pops up, the user will have to click either "OK" or "Cancel" to proceed after entering an input value. If the user clicks "OK" the box returns the input value. If the user clicks "Cancel" the box returns null.

Syntax: `window.prompt("sometext","defaultText");`

Note: The `window.prompt()` method can be written without the window prefix.

Example:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Introduction about alert,prompt and confirm</title>
```

```

<style>
.col
{
    border:4px solid green;
}
body
{
    background-color: blue;
}
</style>
<link

</head>
<body>
    <nav class="navbar navbar-expand-lg bg-body-tertiary">
        <div class="container-fluid">
            <a class="navbar-brand" href="#">AMAN</a>
            <button class="navbar-toggler" type="button" data-bs-toggle="collapse"
data-bs-target="#navbarSupportedContent" aria-controls="navbarSupportedContent"
aria-expanded="false" aria-label="Toggle navigation">
                <span class="navbar-toggler-icon"></span>
            </button>
            <div class="collapse navbar-collapse" id="navbarSupportedContent">
                <ul class="navbar-nav me-auto mb-2 mb-lg-0">
                    <li class="nav-item">
                        <a class="nav-link active" aria-current="page" href="#">Home</a>
                    </li>
                    <li class="nav-item">
                        <a class="nav-link" href="#">Link</a>
                    </li>
                    <li class="nav-item dropdown">
                        <a class="nav-link dropdown-toggle" href="#" role="button" data-
bs-toggle="dropdown" aria-expanded="false">
                            Dropdown
                        </a>
                        <ul class="dropdown-menu">
                            <li><a class="dropdown-item" href="#">Action</a></li>
                            <li><a class="dropdown-item" href="#">Another action</a></li>
                            <li><hr class="dropdown-divider"></li>
                            <li><a class="dropdown-item" href="#">Something else
here</a></li>

```

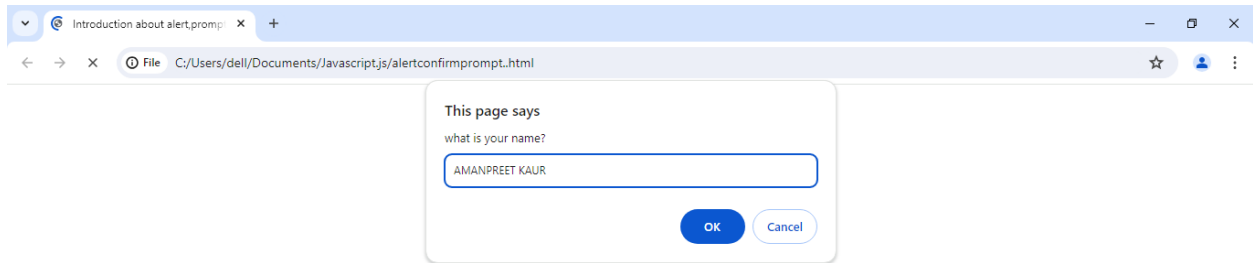

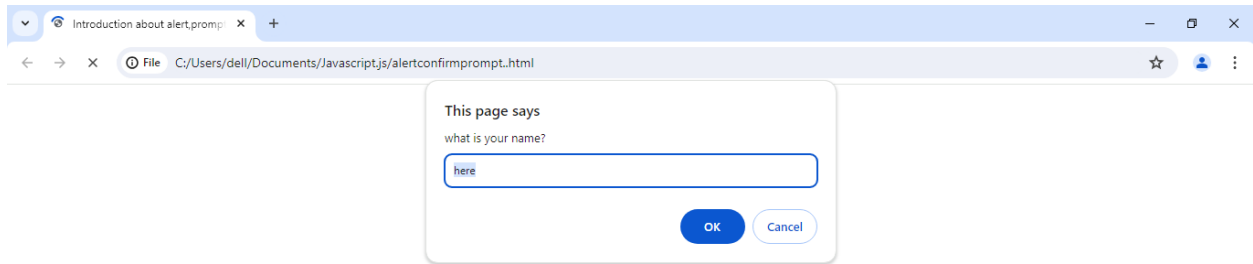

```

        </ul>
    </li>
    <li class="nav-item">
        <a class="nav-link disabled" aria-disabled="true">Disabled</a>
    </li>
</ul>
<form class="d-flex" role="search">
    <input class="form-control me-2" type="search" placeholder="Search"
aria-label="Search">
    <button class="btn btn-outline-success"
type="submit">Search</button>
</form>
</div>
</div>
</nav>
<div class="container">
    <center><h1>WELCOME TO AMAN WEBSITE</h1></center>
    
</div>
<script>
    // does not return anything you can select (ok) only not other choice
    // no return
    //let a= alert("Welcome to Aman website");
    //console.log(a);
//alert("Welcome to Aman website");
    let name=prompt("what is your name?", "here");
    console.log(name);
    //let deletepage = confirm("Do you want to delete this page?");
//deletepage ? console.log("Page is deleted successfully") : console.log("Page is
not deleted");
//console.log(deletepage);
</script>
</body>
</html>

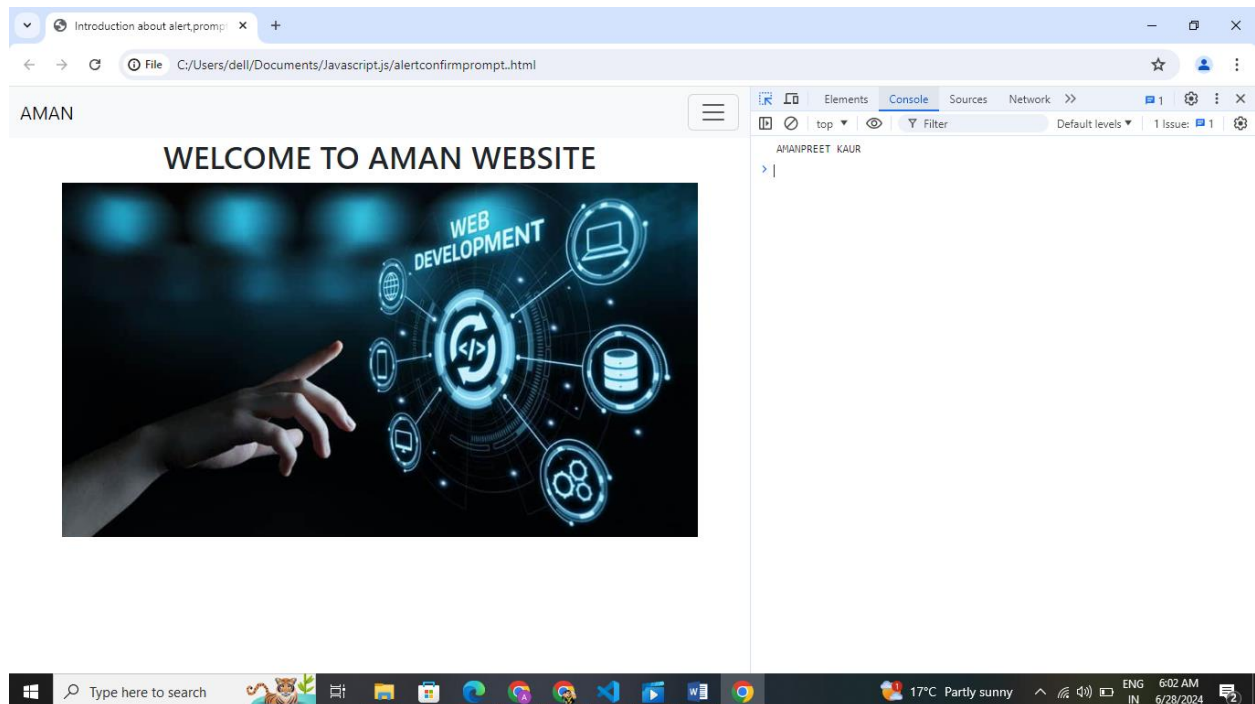

```

Output:

Step1: fill your name and then click ok.

Step 2: Inspect view.

3. Confirm(): A confirm box is often used if you want the user to verify or accept something. When a confirm box pops up, the user will have to click either "OK" or "Cancel" to proceed. If the user clicks "OK", the box returns **true**. If the user clicks "Cancel", the box returns **false**.

Syntax: `window.confirm("sometext");`

Note: The `window.confirm()` method can be written without the window prefix.

Example:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Introduction about alert,prompt and confirm</title>
```

```

      </li>
    </ul>
    <form class="d-flex" role="search">
      <input class="form-control me-2" type="search" placeholder="Search"
aria-label="Search">
      <button class="btn btn-outline-success"
type="submit">Search</button>
    </form>
  </div>
</div>
</nav>
<div class="container">
  <center><h1>WELCOME TO AMAN WEBSITE</h1></center>
  
</div>
<script>
  // does not return anything you can select (ok) only not other choice
  // no return
  //let a= alert("Welcome to Aman website");
  //console.log(a);
//alert("Welcome to Aman website");
  //let name=prompt("what is your name?", "here");
  //console.log(name);
  let deletepage = confirm("Do you want to delete this page?");
deletepage ? console.log("Page is deleted successfully") : console.log("Page is
not deleted");
console.log(deletepage);
</script>
</body>
</html>

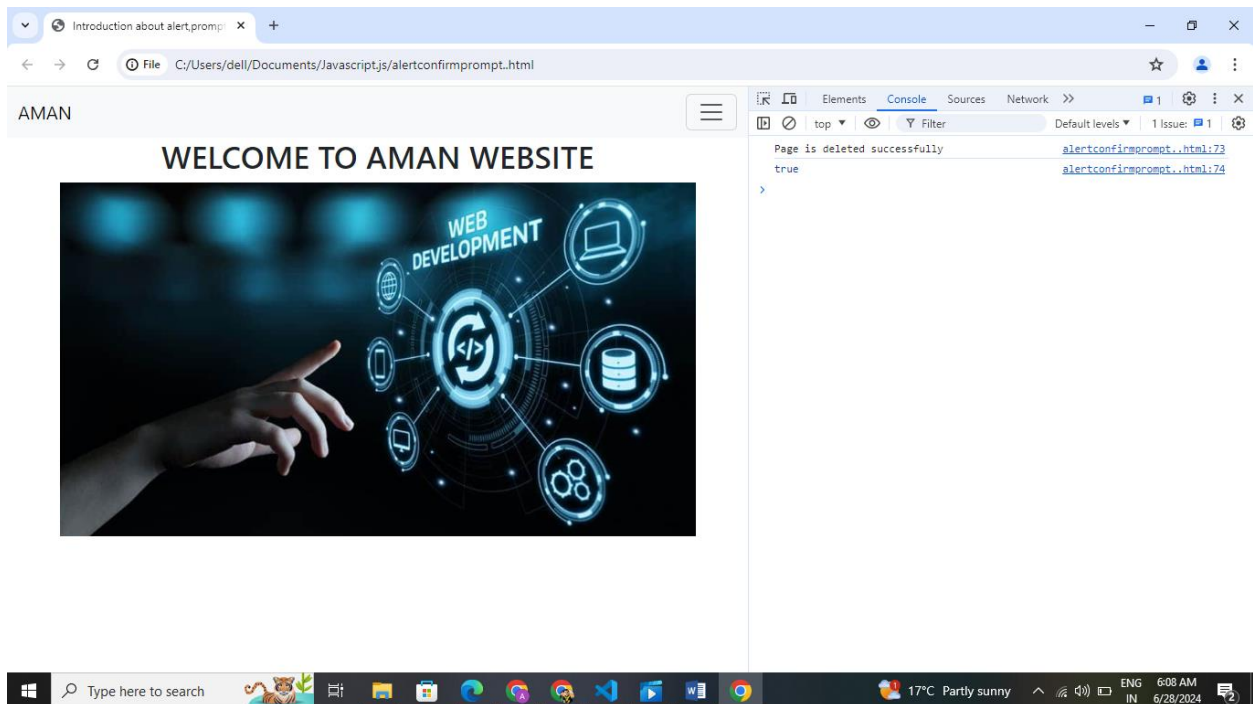

```

Output:

Step 1: click on ok.

Step2: Inspect view show (true) and page is deleted successfully. And also show site view.

Step 3: click on cancel (false) and inspect view show false and page is not deleted. Also show site view.
